Other Useful Links & Videos	2

What your day will look like

- You will meet with 4-7 Amazonians. However, interview schedules can change often, so we appreciate your flexibility. This mix of interviewers will include managers and peers that make up the technical team.
- Your meetings will be back-to-back interviews approximately 45 – 60 minutes each. The majority of your interviews will be one on one. These conversations will be in depth discussions around technologies from your background and the job description.

Interview tips

- Know what interests you about Amazon Web Services and what team you will be interviewing with.
- Take some time to review the [AWS Site](#) and our official [AWS blog](#) or blogs run by the AWS team members like [All Things Distributed](#), or [Perspectives](#).
- Review the job description you will be interviewing for, and reflect on your experience using similar technologies.
- Our in person loops can be more in-depth than the types of questions asked during our phone screens.

Additional Tips for Technical roles

- Visit [Topcoder](#), [CodeChef](#) or similar websites for example coding questions.
- Please be prepared to answer detailed technical questions on concepts like data-structures and algorithms. This most likely will include qualifying requirements and white boarding your solutions with our engineers.
- Be prepared to discuss technologies listed on your resume – for example if you list Java or C++, you should expect technical questions about your experience with these technologies.

Why not try out the power of the cloud and create an AWS account?

Builders build on AWS, so visit www.BuildOn.aws to get going.

Or follow this [simple guide](#) on slide share, check out [AWS documentation](#) and resources, and as an example, follow [this guide](#) to starting your first instance in EC2.

[AWS Free Tier](#) allows you to gain hands-on experience with a broad selection of AWS products and services.
